EDUCATION

Emory University

Master of Science in Public Health, Biostatistics

Atlanta, GA

May 2026

- Data Science Certificate
- **Relevant Coursework:** Database Development, Applied Machine Learning, Survival Analysis
- Charles C. Shepard Award Recipient for Most Scholarly Research Paper

University of Georgia

Bachelor of Science, Biology with Applied Biotechnology Minor

Athens, GA

May 2024

SKILLS

- **Technical:** SAS, R, R Shiny, MS SQL, Python, Git, Docker, Microsoft Office
- **Soft:** Adaptability, Problem-Solving, Teamwork, Oral and Written Communication

EXPERIENCE

Biostatistics Intern

Georgia Clinical and Translational Science Alliance

Atlanta, GA

May 2025-Present

- Develop machine learning algorithm to extract activity and sleep metrics from GENEActiv accelerometer, reducing manual processing time by 10% when compared to historical R packages
- Apply modern regression and predictive modeling techniques in R for optimized analysis of digital health app data to uncover behavioral correlations between language use and depression/anxiety symptoms from the IDAS-II
- Facilitate 5+ statistical consultations, effectively explaining analytical approaches and key findings to technical and non-technical stakeholders
- Maintain reproducible analytic workflows using Git and portable path R packages

Statistical Programmer (Graduate Research Assistant)

Winship Cancer Institute of Emory University

Atlanta, GA

December 2025-May 2026

- Developed and debugged 3+ streamlined SAS macros that utilize SQL queries to optimize data analysis and generate analytical reports, critical for clinical research processed by the Winship Biostatistics Shared Resource hub
- Analyzed large-scale real-world data from Emory Healthcare clinics using SAS to assess the effects of Epic System integration on next generation sequence (NGS) testing rates and efficiency for non-small cell lung cancer patients
- Conducted quality control of code, datasets, and statistical outputs, validating model assumptions and reproducibility while identifying potential data and methodological risks to clinical stakeholders

Graduate Research Assistant

EpiModel Research Lab, Emory University

Atlanta, GA

September 2024-April 2025

- Collaborated biweekly with physicians and epidemiologists to support HIV modeling and inform study design
- Organized and analyzed 6+ nationwide health surveys using R, conducting data cleaning, visualization (ggplot, plotly), and regression analyses to identify trends in HIV and STI testing and diagnoses
- Implemented EpiModel in R to simulate the impact of over-the-counter PrEP availability on HIV transmission, structuring key variables and datasets to guide experimental model development

PROJECTS

A Target Trial Emulation of GOG-0263 Phase III Clinical Trial Based on the NCDB

Thesis

Atlanta, GA

April 2026

- Construct cohort from the National Cancer Database to emulate the GOG-0263 trial and estimate the average treatment effect of added chemotherapy to adjuvant radiation therapy on overall survival in early-stage cervical cancer patients
- Clean and manipulate large EHR cervical cancer participant user file using SAS
- Apply propensity score and inverse probability of treatment weighting methods to estimate the average treatment effect, accounting for confounding by checking covariate balance post-weight implementation and immortal time bias via sensitivity analysis

EXTRACURRICULAR ACTIVITIES

Biostatistics Representative

Rollins Student Government Association, Emory University

Atlanta, GA

January 2025-December 2025

- Collaborated with co-representative, department faculty, and staff to provide new academic and professional resources to students
- Coordinated biweekly engagement events and interdepartmental gatherings to foster community and networking opportunities
