EDUCATION

Emory University

Atlanta, GA

Master of Science in Public Health, Biostatistics

May 2026

- Data Science Certificate
- **Relevant Coursework:** Statistical Inference, Python Programming, Database Development (SQL), Data Visualization
- **GPA:** 3.86 / 4.0
- Charles C. Shepard Award Recipient for Most Scholarly Research Paper

University of Georgia

Athens, GA

Bachelor of Science, Biology with Applied Biotechnology Minor

May 2024

SKILLS

- **Technical:** SAS, R, MS SQL Server, Python, Pandas, NumPy, Git, Docker, Microsoft Office Suite
- **Soft:** Adaptability, Problem-Solving, Teamwork, Verbal and Written Communication

EXPERIENCE

Biostatistics Intern

Atlanta, GA

Georgia Clinical and Translational Science Alliance

May 2025-June 2026

- Investigated conventional R package signal processing and data imputation methods to develop machine learning algorithm for activity/sleep metrics extraction of GENEActiv accelerometers and other wearable technologies
- Applied modern regression analysis and predictive modeling techniques in R for optimized analysis of digital health app data to uncover behavioral correlations between language use and depression/anxiety symptoms from the IDAS-II
- Facilitated 5+ statistical consultations, effectively explaining analytical approaches and key findings to technical and non-technical stakeholders through data visualization tools such as plotly and ggplot
- Maintained reproducible analytic workflows using Git and portable path R packages

Statistical Programmer (Graduate Research Assistant)

Atlanta, GA

Winship Cancer Institute of Emory University

December 2025-May 2026

- Developed and debugged 3+ streamlined SAS macros that utilize SQL queries to optimize data analysis and generate analytical reports, critical for clinical research processed by the Winship Biostatistics Shared Resource hub
- Analyzed large-scale real-world data from Emory Healthcare clinics using SAS to assess the effects of Epic System integration on next generation sequence (NGS) testing rates and efficiency for non-small cell lung cancer patients
- Conducted quality control of code, datasets, and statistical outputs, validating model assumptions and reproducibility while identifying potential data and methodological risks to clinical stakeholders

Graduate Research Assistant

Atlanta, GA

EpiModel Research Lab, Emory University

September 2024-April 2025

- Collaborated biweekly with physicians and epidemiologists to support HIV modeling and inform study design
- Implemented EpiModel R package to simulate the impact of hypothetical over-the-counter PrEP availability on HIV transmission, structuring key variables and datasets to guide experimental model development

PROJECTS

A Target Trial Emulation of GOG-0263 Phase III Clinical Trial Based on the NCDB

Atlanta, GA

Thesis

April 2026

- Constructed cohort from the National Cancer Database to emulate the GOG-0263 trial and estimate the average treatment effect of added chemotherapy to adjuvant radiation therapy on overall survival in early-stage cervical cancer patients
- Cleaned and manipulate large EHR cervical cancer participant user file using SAS
- Applied propensity score and inverse probability of treatment weighting methods to estimate the average treatment effect, accounting for confounding by checking covariate balance post-weight implementation and immortal time bias via sensitivity analysis

EXTRACURRICULAR ACTIVITIES

Biostatistics Representative

Atlanta, GA

Rollins Student Government Association, Emory University

January 2025-December 2025

- Collaborated with co-representative, department faculty, and staff to provide new academic and professional resources to students
- Coordinated biweekly engagement events and interdepartmental gatherings to foster community and networking opportunities
